

Beyond Chatbots — One-Glance Cue Sheet

25-minute talk • 5-minute Q&A • Slide 2 and the last slide have QR codes

PART 1 — HISTORY (0:00-10:10)

Slide	Elapsed	Short cue
1	0:00	Introduce Kira Labs. This is research, not a finished Maya.
2	0:35	Tell them to SCAN Beyond-Chatbots now; pause for codes.
3	1:15	Babbage → Lovelace → Turing → electronic computers.
4	2:25	Turing asks how to judge a machine by conversation.
5	3:40	Dartmouth, Logic Theorist, General Problem Solver.
6	4:40	ELIZA used patterns; illustrative terminal exchange.
7	5:50	ELIZA effect: perceived understanding ≠ tested capability.
8	6:55	Caprica line + belief: machines CAN develop emotions and conscience.
9	8:35	Expert systems → Deep Blue → AlexNet → AlphaGo → foundation models.

PART 2 — NEWBRAIN (10:10-18:00)

Slide	Elapsed	Short cue
10	10:10	NewBrain common engine vs identity-owned state.
11	11:20	Kira, Lisa, Maya, Aster should not inherit each other's autobiographies.
12	12:20	4/4 restart; 10,720 records; 64/64 pairs. State persistence only.
13	14:00	No proof of general learning, recall, or consciousness.
14	15:10	Keep negative results: vision generalization and false memory.
15	16:50	Owner/source/correction must remain distinct.

PART 3 — BODY, APPS & PURPOSE (18:00-23:15)

Slide	Elapsed	Short cue
16	18:00	Show body as STATIC prototype, not completed moving Maya.
17	19:20	Vision/voice/feedback are experiments, not full live senses.
18	20:20	Aster + IdeaForge have proposed interfaces, NOT live NewBrain.
19	21:30	PreNewBrain Peter/Robert setup is experimental; inspect privacy/rights.
20	22:20	Why synthetic people matter to you personally.

CLOSING (23:15-25:00)

Slide	Elapsed	Short cue
21	23:15	Next tests, independent reviewers, hardware and compute collaboration.
22	24:20	Leave QR on screen for FIVE minutes of Q&A.

LAST FIVE MINUTES: QUESTIONS (25:00-30:00)

Leave slide 22 visible. Keep answers short: state the outcome, one limitation, and the next test.

If you run behind: briefly summarize slide 5 or slide 17, but do not rush the Caprica/ELIZA discussion or the 4/4 restart explanation.

Two rehearsals before leaving: (1) scan the GitHub QR with your phone; (2) open the PDF slide backup and the final PPTX on the event laptop.
